

NANDITHA K

Bengaluru • +91 8971363478 • nandithak30@gmail.com

CAREER OBJECTIVE

Aspiring AI Engineer with a strong commitment to continuous learning, eager to contribute effectively to a dynamic organization by applying skills in deep learning, and computer vision, while enhancing technical expertise and achieving professional growth and excellence.

EDUCATION

BTech (CGPA: 9.06)	2025
University of Visvesvaraya College of Engineering	
Class 12 (Percentage: 95)	2021
St Claret PU College	
Class 10 (Percentage :96)	2019
St Ann's High School	

SKILLS

- **AI** : PyTorch , Deep Learning, Computer Vision, OpenCV
- **Programming Languages** : C, C++, Java, Python, Verilog HDL
- **CS Core** : DSA , Operating Systems, DBMS, Computer Networks
- **ECE Core** : Digital Electronics, Analog Electronics, DSP, Microprocessors, CMOS VLSI
- **Soft Skills** : Public Speaking, Time Management, Leadership

EXPERIENCE

AI Engineer Intern – Gyrus AI

(May 2025 – September 2025)

- Learned and applied computer vision fundamentals, implementing CNN architectures using PyTorch and OpenCV for various deep learning tasks..
- Implemented and experimented with multiple YOLO versions (v1, v3, v5, and YOLOX) for object detection tasks and GANs for image generation and augmentation.
- Built and optimized end-to-end pipelines including dataset preparation, augmentation, training, and inference using PyTorch and OpenCV.
- Tuned hyperparameters, evaluated model performance, and applied optimization techniques to improve accuracy and inference speed.
- Gained practical experience in deep learning, computer vision, and real-time object detection applications.

PROJECTS

- **Error Detection and Correction using Reed Solomon Codes:**
Developed an error correction system on Arduino UNO, Implemented encoding and decoding processes leveraging modular arithmetic for finite field operations and Lagrange interpolation for error magnitude calculations, ensuring accurate data transmission.
- **Fashion-recommender-system** (ResNet50):
Developed a Deep Learning-based Fashion Recommender System using ResNet-50 to extract feature embeddings from clothing images. Used PyTorch and OpenCV for feature extraction, image preprocessing, and real-time recommendation generation
- **Simple Search Engine** (Java, HTML, CSS, DBMS) :
A Simple Search Engine was developed using algorithms such as DFS , crawling, indexing and ranking. Meanwhile libraries such as Jsoup and JDBC added efficiency to the project

ACTIVITIES AND VOLUNTEERISM

- Successfully Completed “Technical Skills Training” conducted by Quant Masters for 120 hours.
- Completed “Personality Development and Public Speaking” program conducted by Quant Masters for 60 hours
- Volunteered for technical fest “Inspiron 22.0” in decoration and creativity team and had been to several colleges and promoted regarding the fest.
- Regularly participated in various events organised at schools and colleges.
